

Shutter Valve for the Difficult Applications

MH Koltek Valve

Application

MH Koltek valve is a manually or pneumatically operated valve, designed for use in the food, chemical, pharmaceutical and other industries where valves of sanitary design are needed.

Working principle

A PTFE shutter is operated by means of a handle or an actuator. A spring system presses the shutter against the inside cylindrical surface of the valve body thus ensuring complete tightness.

The air actuated valve can be fitted with *ThinkTop*[®] or a laterally fitted indication unit for remote indication of the valve position.

The manually operated valve can be fitted with laterally indication units (used for LKLA actuators).

The actuator for the valve comes in two versions, single acting or double acting. The single acting actuator operates with one main piston whereas the double acting actuator operates with two main pistons.

Standard design

The valve consist of a rigid body with an internal cylindrical bore and 2 or 3 ports for pipe connection. The two lids have guide rings or bearings for an internal shaft which supports and positions the shutter. The stainless steel handle or the acuator is fitted to turn the shaft.

The actuator consists a system of cylinders and one or two main pistons interconnected with a toothed bar which interacts with a gear wheel on the valve shaft. The system is insensitive to pressure shocks in the valve.

The valve has welding ends as standard.

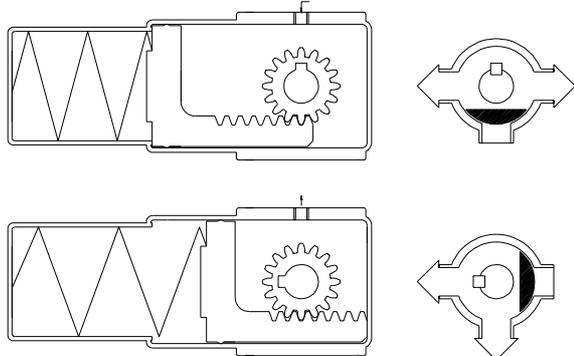

Fig. 2. MH53 with actuator, type KH631.

Actuator functions

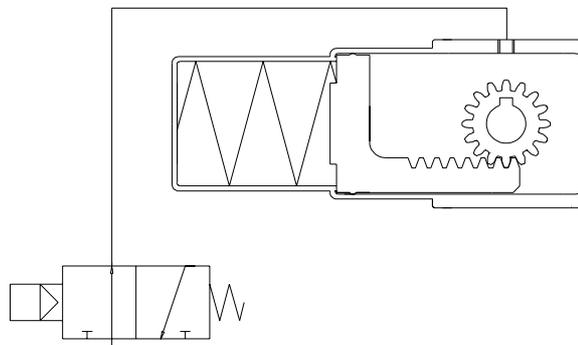

Actuator type 630:

- for 25 mm to 76.1 mm valves only
- two positions
- spring/air
- turning angle 1x90°

Sizes 25-51mm/DN25-50:

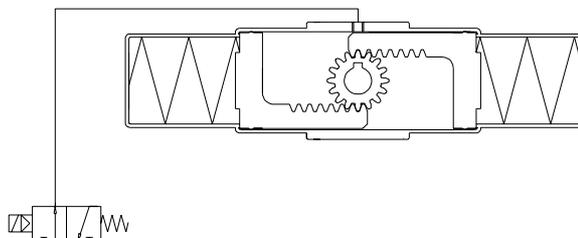

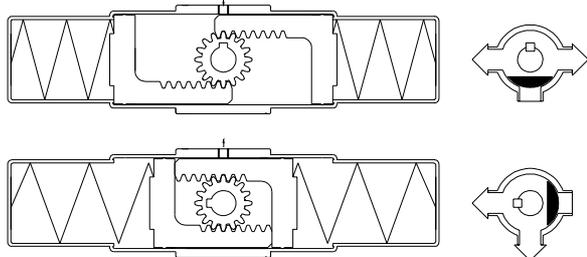

Pneumatic connections

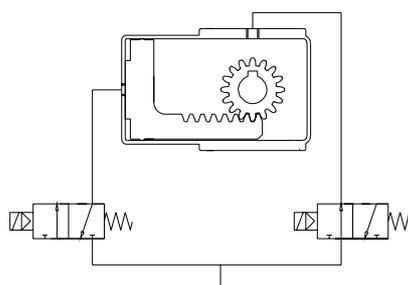

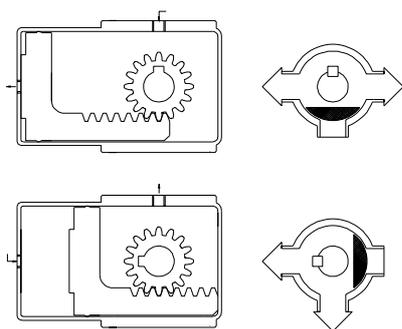

Sizes 63.5-76.1mm/DN65:

Double acting actuator

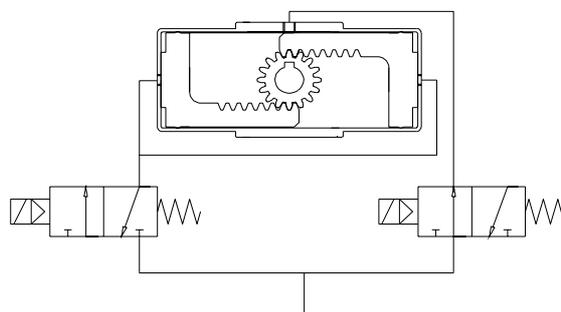

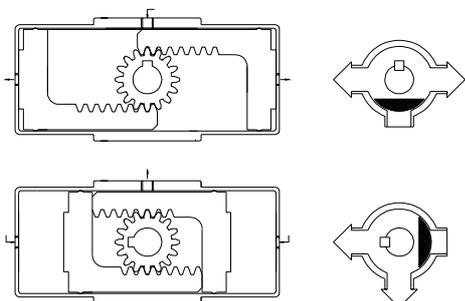

Actuator type 631:

- two positions
- air/air
- turning angle 1x90°

Sizes 89-101.6mm/DN80-100:

Double acting actuator

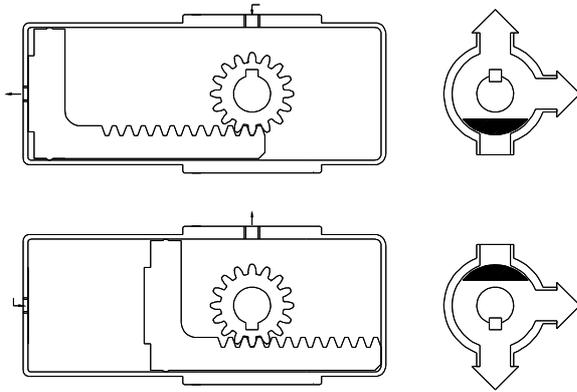

Actuator functions

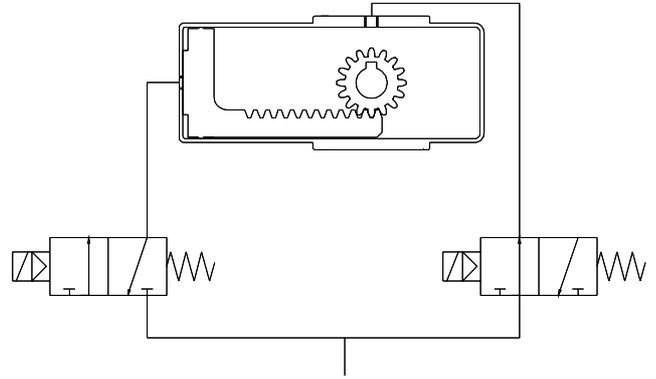

Actuator type 632:

- two positions
- air/air
- turning angle 1x180°

Sizes 25-76.1mm/DN25-65:

Pneumatic connections

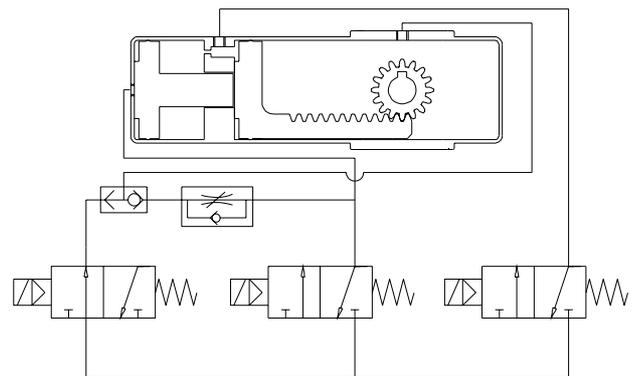

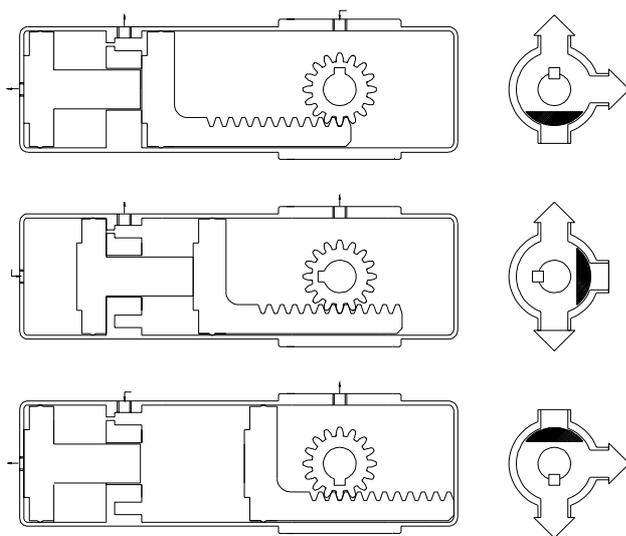

Sizes 89-101.6mm/DN80-100:

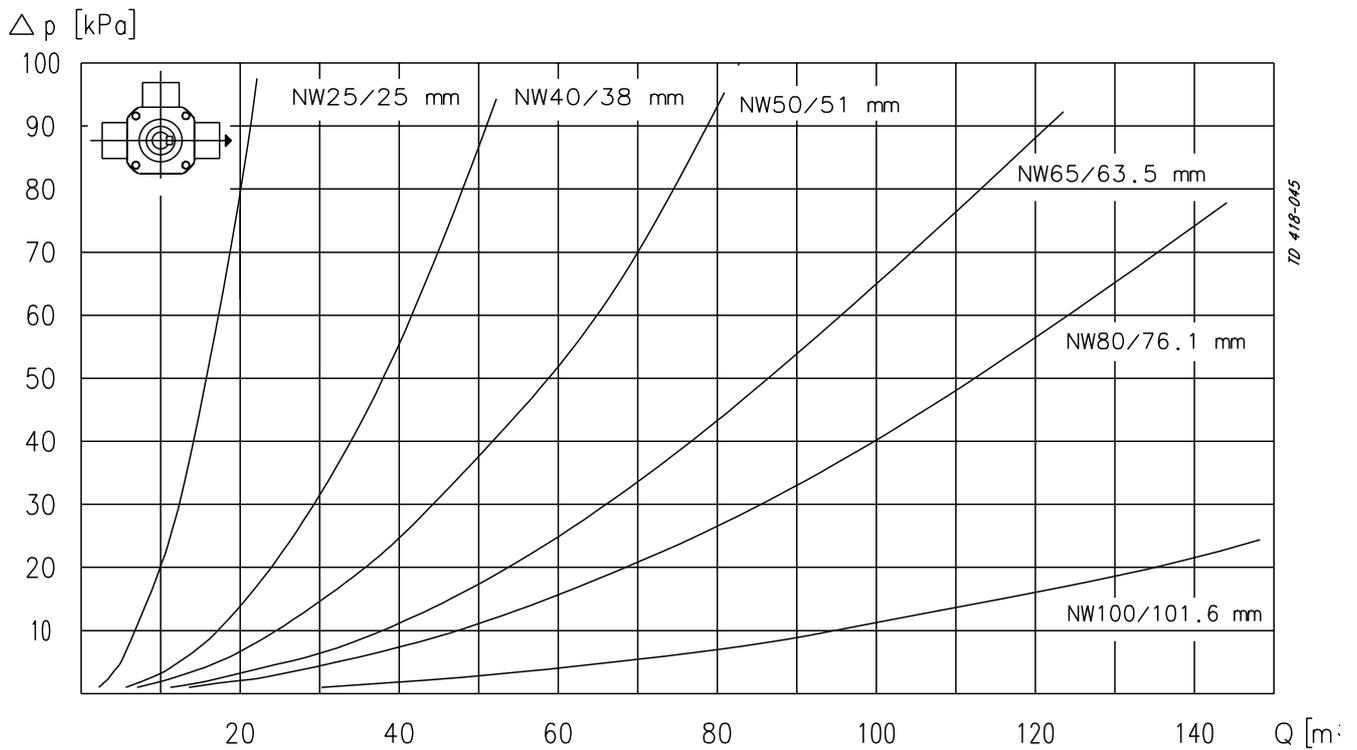

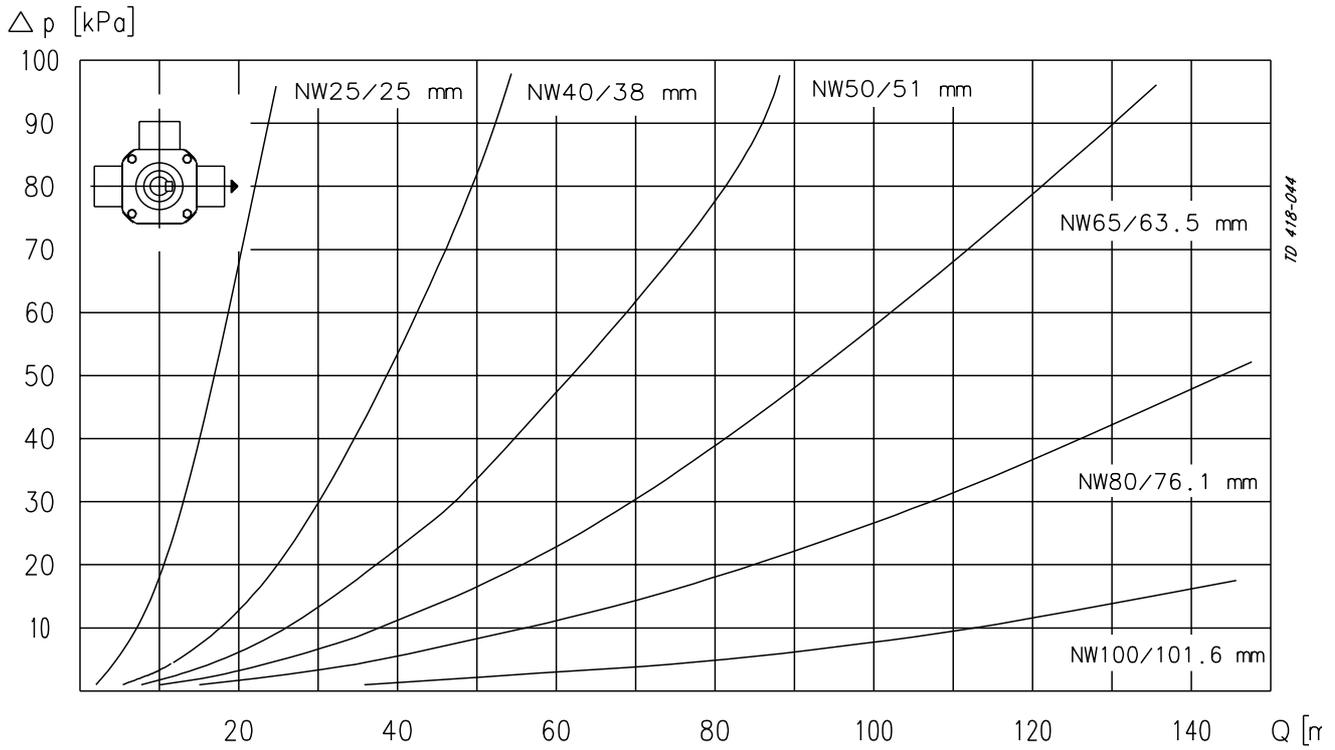

Double acting actuator.

Actuator type 633:

- three positions
- air/air
- turning angles 2x90°

Pressure drop/capacity diagrams

NOTE! For the diagram the following applies:
 Medium: Water (20°C).
 Measurement: In accordance with VDI 2173.

Dimensions (mm)

Caution, opening/closing time:

Opening/closing time will be affected by the following:

- The air supply (air pressure).
- The length and dimensions of the air hoses.
- Number of valves connected to the same air hose.
- Use of single solenoid valve for serial connected air actuator functions.
- Product pressure.
